

THE SMALLEST LARGE GARAGE Protects your car against all weather conditions

- The PARK-O-MIN garage with its special isolation can fully protect your valuable car from any weather elements such as snow, freeze, rain, hail, heat as well as from any possible damages caused by third persons. The isolation material is fire proof and protects your car from any unpleasant situation.
- The PARK-O-MIN garage can provide your car with the same protection and easy access as your conventional garage but in a much smaller space so that if you already have a conventional garage you can use it as a playroom, extra room, gym etc.
- The PARK-O-MIN garage can be very easily assembled by yourself anywhere in very short time (heaviest piece approx. 20 kg) and can be installed on hard or smooth surfaces without any foundation. Thanks to its telescopic design, it needs only 1/3 of the space when it's not in use but it can also be dismantled easily anytime and stored back in its small package.
- The PARK-O-MIN garage will save you in freezing conditions from the hard work of digging your car out of the snow, defreezing the windshields and the locks so that you can get the kids to school on time, or yourself to work, not to mention the damages that the bad weather conditions can cause. In the summer time, however, when the temperatures are high, the inside of your car will remain at a pleasant temperature. No more wasting time by cooling with the A-C before you can drive away.
- With the PARK-O-MIN garage you have easy access to your car; either from the back to load or unload the trunk or from both sides to the front doors. It's even possible to access from the front for inspecting the car engine.
